In a Government Research Institute, Professor Thascalos is working on a matter transmission machine known as TOMTIT - Transmission of Matter Through Interstitial Time. At the Unit Laboratory meanwhile, Dr. Who works on a 'Time-Sensor', a device which detects disturbances in the Time Field -- in particular those caused by the operation of the Master's Tardis. The test run of TOMTIT produces a reading on the Time Sensor and sends the Doctor and Jo down to the Research Centre where a series of mysterious and terrifying events are taking place. Sure enough, Professor Thascalos is the Doctor's old enemy, the Master.

(The Master's plan involves the Crystal of Kronos, which long ago enabled the rulers of Atlantis to control Kronos, the Time Monster. a being from outside Time whose tremendous powers brought first prosperity, and then near destruction, to Atlantis. The Master sets off for Atlantis in his Tardis, determined to obtain possession of the Crystal. This will give him control over Kronos and thus power over Time itself. Such powers in the Master's hands could bring disaster to the entire Universe. Jo and the Doctor pursue the Master through Space and Time to Atlantis, where they try to prevent him from gaining possession of the Crystal. They are helped by Dalios, the wise, old King of Atlantis, and hindered by Galleia, the King's young and beautiful wife, who casts in her lot with the Master. In the final struggle, the full fury of Kronos is released, Atlantis is destroyed and the Doctor comes to a final confrontation with the Master outside Space and Time. The Master is defeated but once again escapes to work more mischief.....)

Volcanic explosions; a bleak landscape shaken by earthquake: DOCTOR WHO himself looming out of the smoke and seeing a strangely shaped crystal. He goes to pick it up but an enormous hand forestalls him. He looks up and sees the MASTER, holding the crystal and laughing.

MASTER: Welcome! Welcome to your new master!

DOCTOR WHO goes towards him, but he is no longer there although we can still hear the mocking triumphant laughter.

DOCTOR WHO looks wildly around. The smoke is so thick that he can see nothing. As the noise of the volcano grows even louder, the dream becomes a jumble of threatening images; the trident; the concentric circles of Atlantis; the Minotaur; massive eruptions. Out of the noise comes a terrified scream.

BRIGADIER: Fearsome looking load of electronic nonsense you've got together Doctor Ingram. How does it work? /

RUTH: Well...

S/B TK

BRIGADIER: In words of one syllable...?

(RUTH LAUGHS)

To begin with...

RUTH: ~~I'll do my best... Now, as Doctor Percival just said... time isn't smooth. It's made up of bits.~~

SOF

Ext. Country Road. Day.

Bessie is shooting
along at about two
hundred miles an
hour.

JO and DOCTOR WHO
have to shout above
the wind.

(Break next)

JO: Please slow down, Doctor!
It's not safe to drive so quickly.

DOCTOR WHO: It's perfectly safe.
My reactions are ten times as fast
as yours. And Bessie's no ordinary
car, remember.

They come to a road
junction.

Bessie stops in about
five yards.

DOCTOR WHO: See what I mean?

. They shoot
off again.

JO: But...why didn't I go through
the windscreen?

DOCTOR WHO: The brakes work by
the absorbtion of inertia - including
yours.

The sensor starts
to flash.

JO: It's starting again!

DOCTOR WHO: Come on, Bessie, old
girl. It's up to you now.

They disappear down
the road even faster
than before.

Ext. Institute. Day.

BESSIE sweeps past the
notice board of "Newton Institute".
